Technology thus enabled imperialism. It also created a motive for imperialism, because of a phenomenon referred to by historians as the “Second Industrial Revolution.” The Second Industrial Revolution consisted of the development and spread of a new generation of technological innovation: modern steel, invented in 1856, electrical generators in 1870 (leading to electrical appliances and home wiring by 1900 in wealthy homes), and both bicycles and automobiles by the 1890s.

6.2: The Second Industrial Revolution - Humanities Libertexts

The Second Industrial Revolution was another of the great and important advances in technology and society. New innovations in the production of steel, oil and electricity led to the introduction of automobiles and public airplanes. Historians have labeled the years 1870 to 1914 as the period of the Second Industrial Revolution.

Ch. 6 Second Industrial Revolution Flashcards | Quizlet

Steel is often cited as the first of several new areas for industrial mass-production, which are said to characterise a “Second Industrial Revolution”, beginning around 1850, although a method for mass manufacture of steel was not invented until the 1860s, when Sir Henry Bessemer invented a new furnace which could convert molten pig iron into steel in large quantities. However, it only became widely available in the 1870s after the process was modified to produce more uniform quality.
