In 1969, Citroen toyed with the idea of using a rotary engine to power its cars. The result was the Ami 8-based M35, of which 267 were built and given to high-mileage customers.

This sixth volume in the Academy of International Business Series presents leading-edge research on contemporary themes in international business. Part one explores several of the major issues that currently face multinational enterprises: government policy, the Asia crisis, knowledge and technology management, corporate-subsidiary relations,

strategies for small firms and the impact of the technological revolution. Part Two of the volume examines the impact of foreign direct investment, FDI. Written by a range of international contributors, a key focus of these papers is the particular issues relating to foreign investment in the emerging markets of Central and Eastern Europe and South-East Asia.

During the last decade Europe has been transformed both politically and commercially. The establishment of a genuinely single marketplace in the context of an expanding membership has enabled the European Union greatly to enhance its role on the world stage. In the areas of trade and commercial policy the Union increasingly speaks with one voice. As a result of the Maastricht Treaty on Economic and Political Union of 1993, a process has been set in motion whereby the embryonic mechanisms of a common foreign policy (European Political Cooperation or EPC) are gradually evolving into a more comprehensive Common Foreign and Security Policy (CFSP). The contributors to this volume describe and evaluate the nature and extent to which the European

Union plays an independent role in international affairs. This pioneering work makes an important contribution to the literature on the European Union since the chapters present a comprehensive picture of the Union's foreign economic policies and actions, its foreign security policy, and the supranational nature of much Union decision-making. The book is significant, not only because of its dual focus on economics as well as politics, but also because it comprehensively covers the broad range of Union policies in both the economic and political spheres. The intended level of readership is undergraduate courses on the EU and on European politics; upper level undergraduate courses in International Relations; and graduate survey courses on the EU. The book is sufficiently comprehensive and instructive to achieve a wide readership, especially in North America and the UK.
