Differential Diagnosis in Musculoskeletal MRI is a unique desk reference offering extensive descriptions of MRI findings that enable radiologists to more easily diagnose a wide range of musculoskeletal conditions. The authors have placed the most essential content covering etiologic, clinical, and pathological aspects in tabular format to assist readers in quickly and efficiently obtaining the information they need.

---

Differential Diagnosis in Musculoskeletal MR  
Differential Diagnosis in Musculoskeletal MRI was written with the goal of providing a simple reference book on the various pathologies encountered in a musculoskeletal radiology practice through an image-rich presentation of disease states and injuries. In this aim, the authors have succeeded, and should be applauded for the breadth of topics they were able to cover.
