changed the landscape of America. Though the Maruti 800, the Tata Indica, the Hyundai Santro and the Maruti Alto, became engines of growth for India, these cars neither drove away the cow nor changed the way Indians travelled. Tata's Nano was expected to change all that and become the ultimate people's car, capturing the imagination of the middle class across nations and cultures. In spite of its petite dimensions, the Nano was meant to stand tall. Yet it did not. What caused it to fail and fall from grace despite being lauded as the "right product at the right time" and "the most significant new car since the Ford Model T was introduced 100 years ago"? But is it really all over or is there still hope for India's "little wonder"? What will the people's cars of tomorrow be like? A Million Cars for a Billion People delves into the questions, concerns and doubts, as well as the many misconceptions and myths, that have gathered

momentum over the years about India's automotive history and the industry's mission to create a true "people's car". The very first cars that came to India; the early beginnings of the industry; the nascent history of the automobile across nations like Germany, France, US, the UK, Italy, Japan and South Korea, is narrated with authority and charm, from the viewpoint of the quest for the ultimate people's car.

Deze bundel gaat over de vorming van identiteit door het samenspel van etniciteit, nationalisme en de effecten van globalisering. De essays in *Crossroad Civilisations: Ethnicity, Nationalism and Globalism in Asia* maken de gelaagdheid en de complexiteit hiervan duidelijk.

In *Anthropological Futures*, Michael M. J. Fischer explores the uses of anthropology as a mode of philosophical inquiry, an evolving academic discipline, and a means for explicating the complex and shifting interweaving of human bonds and social interactions on a global level. Through linked essays, which are both speculative and experimental, Fischer seeks to break new ground for anthropology by illuminating the field's broad analytical capacity and its attentiveness to emergent cultural systems. Fischer is particularly concerned with cultural anthropology's interactions with science studies, and throughout the book he investigates how emerging knowledge formations in molecular biology, environmental studies,

computer science, and bioengineering are transforming some of anthropology's key concepts including nature, culture, personhood, and the body. In an essay on culture, he uses the science studies paradigm of "experimental systems" to consider how the social scientific notion of culture has evolved as an analytical tool since the nineteenth century. Charting anthropology's role in understanding and analyzing the production of knowledge within the sciences since the 1990s, he highlights anthropology's aptitude for tracing the transnational collaborations and multisited networks that constitute contemporary scientific practice. Fischer investigates changing ideas about cultural inscription on the human body in a world where genetic engineering, robotics, and cybernetics are constantly redefining our understanding of biology. In the final essay, Fischer turns to Kant's philosophical anthropology to

reassess the object of study for contemporary anthropology and to reassert the field's primacy for answering the largest questions about human beings, societies, culture, and our interactions with the world around us. In *Anthropological Futures*, Fischer continues to advance what Clifford Geertz, in reviewing Fischer's earlier book *Emergent Forms of Life and the Anthropological Voice*, called "a broad new agenda for cultural description and political critique."

This book sheds light on a little-known aspect of the Imperial family of Japan: For three generations, members of the family have devoted themselves to biological research. Emperor Showa (Hirohito) was an expert on hydrozoans and slime molds. His son,

Emperor Akihito, is an ichthyologist specializing in gobioid fishes, and his research is highly respected in the field. Prince Akishino, Emperor Akihito's son, is known for his research on giant catfish and the domestication of fowl, while Prince Hitachi, Emperor Akihito's brother, has conducted research on cancer in animals. The book shows how they became interested in biology, how seriously they were committed to their research, what their main scientific contributions are, and how their achievements are valued by experts at home and abroad. To commemorate the 60-year reign of Emperor Showa and his longtime devotion to biology, the International Prize for Biology was founded in 1985. The prize seeks to recognize and encourage researches in basic biology. A list of winners and a summary of their research are presented in the last part of the book. The author, an eminent biologist who has given lectures to the
