After selecting JavaServer Faces, various configuration options become available. Under the Libraries tab, you can specify how the project accesses JSF 2.0 libraries. The default option is to use the libraries included with the server (the GlassFish server). However, the IDE also bundles the JSF 2.0 libraries.

An Introduction to JavaServer Faces (JSF) 1

Figure 1: JavaServer Faces Implementation of MVC. The JSF Lifecycle. The Faces Controller servlet serves as the link between the user and the JSF application. It operates within the confines of a well defined JSF Lifecycle which dictates the entire flow of events between user requests. For example, upon an initial Web request to access a JSF application, the Faces controller servlet handles the request by first preparing the JSF context, which is a Java object that holds all application data.

Introduction to Javaserver Faces - Oracle
JavaServer Faces technology simplifies building user interfaces for JavaServer applications. Developers of various skill levels can quickly build web applications by: assembling reusable UI components in a page; connecting these components to an application data source; and wiring client-generated events to server-side event handlers.
