Lucas workshop instructions - other stuff

Install a 0-60 amp ammeter in series with alternator main output cable, at its connection with starter solenoid. Start engine and run alternator at 5000 RPM until ammeter shows an output not exceeding 7.5 amps. Voltage reading should be 14.1 - 14.5 volts. If reading obtained is unstable or outside specified limits, the voltage regulator is faulty and must be replaced.

In any case dynamos became obsolescent over 30 years ago service and parts will be very difficult to find. The original alternators fitted to most British marine/marinised engines from the late 1960s were the Lucas 10AC or 11AC, the 11AC having a higher output. These alternators used external voltage regulators, energising relays, and warning lamp controls. Many used a "rising oil pressure ...
