A manual for understanding the anatomical and emotional components of posture in order to heal chronic pain [] Contains self-help exercises and ergonomics information to help correct unhealthy movement patterns [] Teaches how to adopt suitable posture in the modern sedentary world Many people cause their own back and body pain through their everyday bad postural and movement habits. Many sense that their poor posture is probably the root of the problem, but they are unable to change long-standing habits. In The New Rules of Posture, Mary Bond approaches postural changes from the inside out. She explains that healthy posture comes from a new sense we can learn to feel, not by training our muscles into an ideal shape. Drawing from 35 years of helping people improve their bodies, she shows how habitual movement patterns and emotional factors lead to unhealthy posture. She contends that posture is the physical action we take to orient ourselves in relation to situations, emotions, and people; in order to improve our posture, we need to examine both our physical postural traits and the self-expression that underlies the way we sit, stand, and move. The way we walk, she says, is our body's signature. Bond identifies the key anatomical features that impact alignment, particularly in light of our modern sedentary lives, and proposes six zones that help create postural changes: the pelvic floor, the breathing muscles, the abdomen, the hands, the feet, and the head. She offers self-help exercises that enable healthy function in each zone as well as information on basic ergonomics and case histories to inspire us to think about our own habitual movements. This book is a resource for Pilates, yoga, and dance instructors as well as healthcare professionals in educating people about postural self-care so they can relieve chronic pain and enjoy all life activities with greater ease.

A condensed version of the author's "The Atlas of Musculo-skeletal Anatomy," this book is aimed at students and the general reader. The first seven chapters explain anatomical orientation, tissues, bone, the axial and appendicular skeletons, joints, and skeletal muscle and fascia. In the book's final chapters, the muscle groups of the body's four major regions are amply illustrated, with composite drawings detailing each region's deep and superficial muscles in both anterior and posterior views. Color tables show each muscle's origin, insertion, innervation, and action.

The decade since the publication of David Butler's Mobilisation of the Nervous System has seen the rapid growth and influence of the powerful and linked forces of the neurobiological revolution, the evidence based movements, restless patients and clinicians. The Sensitive Nervous System calls for skilled combined physical and educational contributions to the management of acute and chronic pain states. It offers a "big picture" approach using best evidence from basic sciences and outcomes data, with plenty of space for individual clinical expertise and wisdom.

For twenty years, the Roman Empire conquered its way through modern-day Germany, claiming all lands from the Rhine to the Elbe. However, when at last all appeared to be under control, a catastrophe erupted that claimed the lives of 10,000 legionnaires and laid Rome's imperial ambitions for Germania into the dust. In late September of 9 AD, three Roman legions, while marching to suppress a distant tribal rebellion, were attacked in a four-day battle with the Germanic barbarians. The Romans, under the leadership of the provinces governor, Publius Quinctilius Varus, were taken completely by surprise, betrayed by a member of their own ranks: the German officer and secret rebel leader, Arminius. The defeat was a heavy blow to both Rome's military and its pride. Though the disaster was ruthlessly avenged soon afterwards, later attempts at conquering the Germans were half-hearted at best. Four days in September thoroughly examines the ancient sources and challenges the hypotheses of modern scholars to present a clear picture of the prelude to the battle, the fighting itself and its aftermath.
