When BMW Mini introduced the N18 engine in 2010, we all breathed a sigh of relief. It's forerunner, the N14 engine, was notoriously prone to timing chain tensioner failures. Death Rattle is an issue
that is commonly found in
the MINI N16 engine from
2006-2013. The issue relates
to the spring-loaded timing
chain tensioner becoming
less efficient or failing
which in turn leads to a
slacking of the timing chain
which in turn hits the
timing chain guide rails and
as a result leads to damage
to these guides.
