Gorillas using iPads, lemurs finger painting, squirrel monkeys popping bubbles . . . these primates are pretty smart! Could you make the grade in Primate School? Learn how diverse the primate family is, and some of the ways humans are teaching new skills to their primate cousins. Author Jennifer Keats Curtis is once again working with organizations across the country to share fun facts about primates through this photo journal.

ZPL is a new array programming language for science and engineering computation. Designed for fast execution on both sequential and parallel computers, it is intended to replace languages such as Fortran and C. This guide provides a complete introduction to ZPL. It assumes that the reader is experienced with an imperative language such as C, Fortran, or Pascal. Though precise and thorough, it does not attempt to be a complete reference manual, but rather it illustrates typical ZPL usage and explains in an intuitive manner how the constructs work. The emphasis is on teaching the reader to be a ZPL programmer. Scientific computations are used as examples throughout, and a list of common features is printed on the inside back cover for easy reference.

• Find everything you need to know in this comprehensive guide to creating forms in SAP• Learn how to solve real-life problems that occur when working with interactive forms• Expand your knowledge with new information on ABAP Offline Infrastructure, XDC Editor, JobProfiles Editor, parallelization of print jobs, and much more If you've ever had any questions about working with SAP's interactive forms, this book will be a valuable addition to your library. Whether you are a beginning or advanced technical consultant, developer, or form designer, you will learn everything you need to know about working with SAP Interactive Forms by Adobe. The book offers a comprehensive discussion of the topic, explaining what interactive forms are, how they are created and used, and how to solve common problems associated with them. This expanded second edition is updated for SAP NetWeaver 7.20, and includes new coverage of ABAP Offline Infrastructure, XDC Editor, JobProfiles Editor, parallelization of print jobs, and more.

This comprehensive study guide thoroughly covers the CompTIA RFID+ exam, the only certification offered for radio frequency identification (RFID), the technology that is rapidly gaining popularity and is expected to completely replace bar codes. Your study will focus on interrogation zone basics, testing and troubleshooting, standards and regulations, tag knowledge, design selection, installation, site analysis, RF physics, and RFID peripherals. The accompnaying CD-ROM provides two bonus exams, a detailed glossary of terms, and a searchable PDF of the book.

Complex business requirements require complex solutions. Harness the power of SAPscript-and create complex layout sets and dynamic output scenarios that make a powerful impression ... using this first accessible hands-on guide written by a developer, for developers.

Find configuration, troubleshooting, and tips and tricks for local and server-based printing Discover access methods, printing in Windows, forms, barcodes, and much more Applicable for all releases from 4.6 Printing problems abound again and again in everyday jobs. As an administrator, you need solutions for the activation of different printers and printing types, the transition to new hardware, printing in several locations, the use of various technologies, and the output

of international characters, to name a few. This book teaches you everything you need to know to configure printing setup (software and hardware side), and describes the ways in which data from the SAP system can be converted in different print formats (ABAP lists, SAPscript, Smart Forms, and Interactive Forms). You will also find numerous screenshots and detailed descriptions of configuration parameters that will continue to help you in your daily work. Don t throw your printer out the window this book gives you all the answers to the most frequently asked questions for output management in SAP systems in one resource

This volume comprises the proceedings of the 5th International Symposium on Shallow Lakes, held at Dalfsen, The Netherlands, in June 2005. The theme of the symposium was Shallow Lakes in a Changing World, and it dealt with water-quality issues, such as changes in lake limnology, especially those driven by eutrophication and pollution, increased nutrient loading and productivity, perennial blooms of cyanobacteria and loss of biodiversity.

From the dawn of time, ruby and sapphire have both attracted and fascinated humans in ways that few other items could.While objects of desire are found throughout the natural world, physical beauty is too often ephemeral. From the allure of a man, woman, flower or butterfly, through the fleeting moments of a sunset, there is little that lasts and practically nothing that can be passed down to our descendants. The exception is precious stones. Not only are they the most durable creations of mother nature, but their visual splendor is truly eternal.In this companion to his 2013 book, Ruby & Sapphire--A Collector's Guide, Richard Hughes examines these gems from the gemological standpoint, delving into these gems not just from the aesthetic, but also from the scientific point of view.The product of nearly 40 years of firsthand experience, it covers every aspect of the subject from A-Z. History, sources, prices, quality analysis, synthetics and treatments, everything is here. Ruby & Sapphire--A Gemologist's Guide represents the most comprehensive book ever written on a single precious stone. With over 1000 photos, maps and illustrations and 3500 references, it is nothing less than a tour-de-force of gemological scholarship.

The Twelfth International Workshop on Maximum Entropy and Bayesian Methods in Sciences and Engineering (MaxEnt 92) was held in Paris, France, at the Centre National de la Recherche Scientifique (CNRS), July 19-24, 1992. It is important to note that, since its creation in 1980 by some of the researchers of the physics department at the Wyoming University in Laramie, this was the second time that it took place in Europe, the first time was in 1988 in Cambridge. The two specificities of MaxEnt workshops are their spontaneous and informal charac ters which give the participants the possibility to discuss easily and to make very fruitful scientific and friendship relations among each others. This year's organizers had fixed two main objectives: i) to have more participants from the European countries, and ii) to give special interest to maximum entropy and Bayesian methods in signal and image processing. We are happy to see that we achieved these objectives: i) we had about 100 participants with more than 50 per cent from the European coun tries, ii) we received many papers in the signal and image processing subjects and we could dedicate a full day of the workshop to the image modelling, restoration and recon struction problems.
